

## Measuring Distance and Area

### Park Atlas Web Viewer Job Aide Series

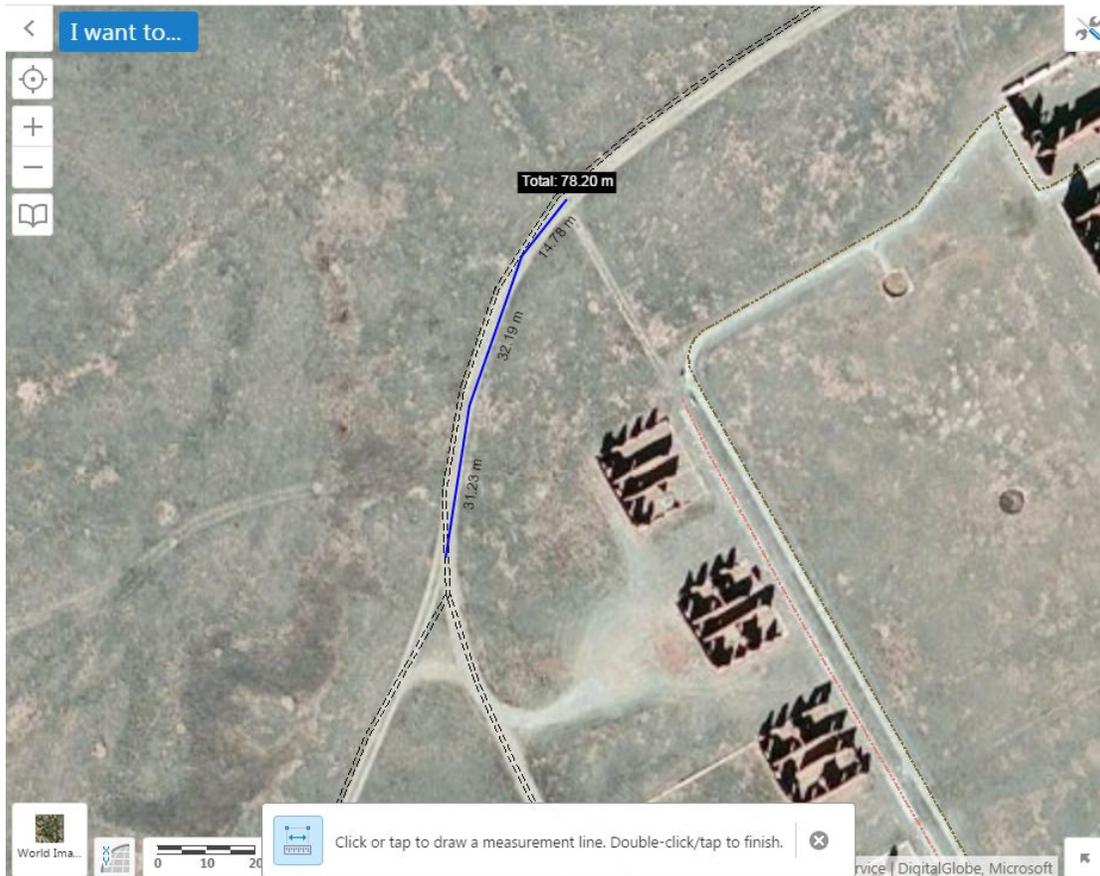

You can measure both distance and area in your Park Atlas map session using varying units of measure.

1. Once you have zoomed into the area where you will be measuring, click on the Open toolbar button in the upper right hand corner of the map and select the Measure tab. Click on the Measure drop down to choose distance or area then calculate the distance from one point to another or the area around something.

2. For distance, click on the map and draw the line you want to measure. Each single click adds a segment to the total measurement. To end or finish the line, double click where you want it to end.

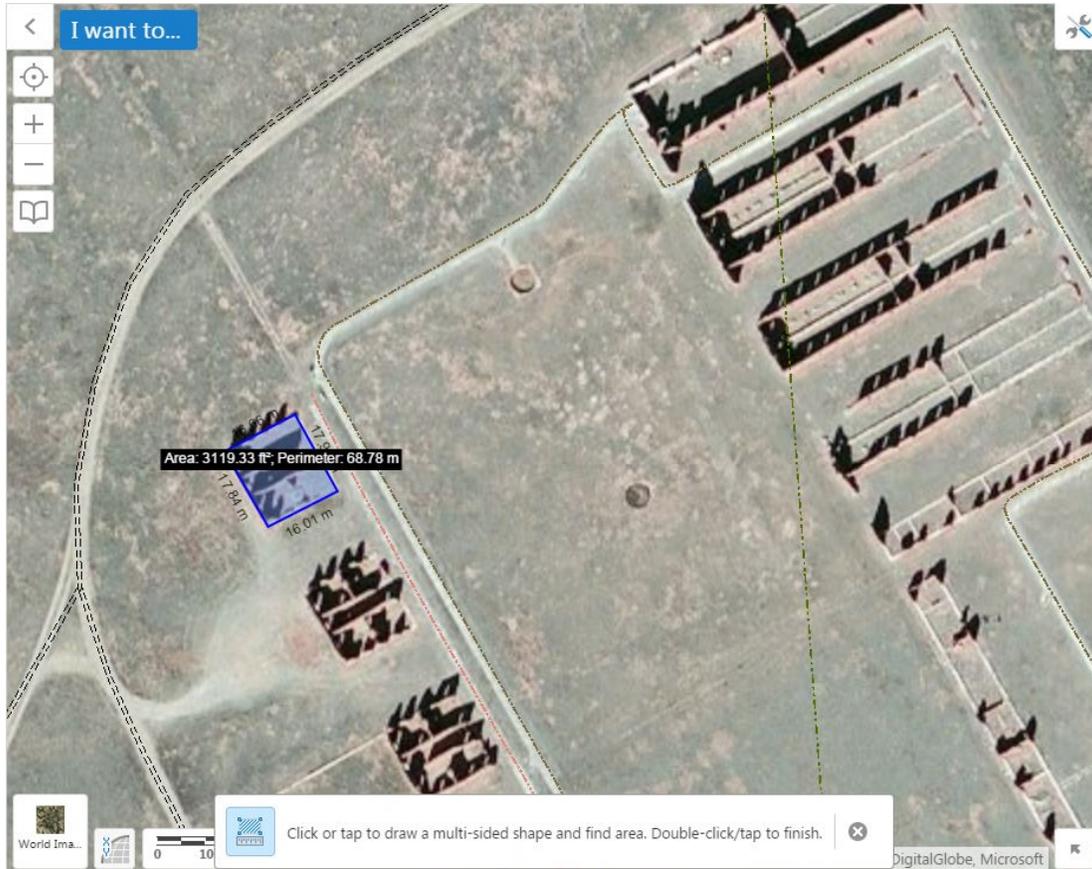

The larger segments will be labeled with the distance of that segment.

## Measuring Distance and Area

### Park Atlas Web Viewer Job Aide Series

- For area, click on the map and draw the area you want to measure. Each click adds an incremental part to the total area measurement. To end or complete the area double click where you want it to end. You will be given totals for the **Perimeter** of the area and the entire **Area** in the Measurement Info area of the toolbar.

- You can change the **Units** of measure by clicking the dropdown arrow next to the **Units** type and select the unit you prefer: Feet, Yards, Meters, Kilometers, Miles, or Nautical Miles.
